Learning Outcomes

On completion of this course, learners will be able to:

- LO1: Plan scoped captures and configure a reproducible analyst profile.
- LO2: Navigate, filter, summarize and time network exchanges.
- LO3: Interpret DNS, ARP, IPv4, ICMP and UDP evidence.
- LO4: Diagnose TCP and application behaviour, including HTTP and authorised TLS inspection.
- LO5: Report observed facts, hypotheses and next actions with defensible evidence.

Learning Reinforcement

- Every topic is followed by hands-on labs that learners complete on their own machine.
- Each lab ends with a 'Test it' verification step so learners can confirm their own progress.
- The trainer circulates during lab time to give individual feedback and unblock learners.
- Each topic closes with a recap mapped back to the course learning outcomes.
